Software price rise causes stir

Imagop has caused tears in the software industry — first by slashing prices and now raising them.

All its recent prices, including best sellers like Zaxxon, Soccer and Madly Wakers, come down in price by £1.35 to £1.95 from Monday.

Imagop's next two arcade-style games, Cosmic Crusier and MC 800, will also rise to £1.95.

But future releases will cost more than £1.5.

Imagop operations director Brian Ferris told: They are going to be expensive and worth it. We know what the kids want. They love Visions don't they?

The first two at the new higher prices will be called. Continued on page 7

Nine tracks for speed

Disk speed for half the price is claimed for a new data storage system using cartridges with 120 Mega of tape.

Called Phoscopy, it is designed to appeal to home computer users who cannot afford disc systems.

Mike Lewis, managing director of makers Phr Mag Systems, said: "There is such a huge gap between the slow speed of tape recorders and the £200 or £400 you would have to

On a hostile planet deep in space
an earth patrol is marooned.
Only one person can save it.

TROOPA TRUCK

**The galaxy's most lovable
battle wagon.**

Marooned Troopabunks from the back. LavaBarrens Tanks in front.
HellsChargers from above.

A heavily marooned to Zon has become a desperate fight for
survival.

Now as Troopa Truck rumbles and lugs across Zon's surface, only
one person in the galaxy can save it.

You

The first to Zon is 65 99 (1987 inc. VAT), and the journey starts at
Boots WH Smith, Farnborough, or any intergalactic computer games shop.
Your Commodore 64 will love it to bits.

Price rise

From front page

Bandersnatch and Cyclapac, for the Spectrum and the Commodore, is.

Although still on cassette, they will be based along with other games, like maps and detailed playing instructions.

Mr. Evers and Imagine believed software sold as games alone had reached its limit, and more now left to be offered to customers.

A by-product is that piracy would be less likely because the other ways in the boxes would be essential to use the games.

Mr Evers and Imagine had also developed a system making its products nearly impossible to copy.

He agreed that the price cuts were to clear the decks and said that, in £1.95, the package was a bargain.

The company did not know exactly how much the Future robot — set out to show three months — would cost, but it was spending £10,000 on marketing.

Vision Games boss Nick Alexander, who is also chairman of the Guild of Software Makers, said when he heard the news "I don't understand it at all. What's the logic behind that?"

"I'm totally amazed and bemused by Imagine's thinking and turning. First they drop their price and the next minute they are making them too high."

When I applied their move away from lower prices, I think they have over-reacted in the opposite direction. They will find it very hard, no matter what the critics, to sell games at £15.

Fred Coombs, managing director of Quicksilver, said his company did not plan to move from its pricing policy which puts a Spectrum game at £5.95.

The companies would be programs like the Games Designers and Playbooks, a newsletter for the Commodore 64.

Bob Simpson, head of PCS Distribution, believes the prices will be about £15.95 and £19.95. He said "Imagine are clearing their programs are completely necessary. If that's the case it's reasonable and good for the industry."

He said they would have to offer at least the value of the profit from Phoenix Software, whose six arcade games and an adventure are based in a video-card case for £9.95.

Imagine, 1 St Thomas St, Liverpool L1 4AB.

Nine tracks

From front page

pay for the cheapest floppy disc system."

Phoenix costs £14 and the interface, which runs up to eight drives, is £29.95. Tape cartridges cost £3-£4.50 depending on quantity.

Up to 4,000 can be stored, says Pto Mag, and accessed in three to four seconds. Transfer rate is 10K per second, around 200 times faster than cassette.

At present the system works only on the 486C computer, but Pto Mag plans to make it available for other popular home systems.

Pto Mag says the speed and reliability are due to a nine-track recording head — recording one byte across the quarter-inch width of the tape — and an over-clocking system controlled by an on-board processor.

Phoenix has its own Loop Pacing System, using the standard BBC file system, BASIC commands and its own commands, prefixed by an apostrophe.

The continuous loop of tape is driven at 15 inches per second and, says Pto Mag, coaches the cartridge will only occasionally, so tape inherent is not needed.

Programs on test files from cassette can be transferred.

Mr Lucas and his company was talking to software companies about supplying software on the new cartridge.

Fitting the system means inserting plugs into two other sockets and raising two magnets.

Once installed, the Phoenix system plugs into the 486C disc port and a second plug goes into the power output socket.

Pto Mag says the installation should not take more than 30 minutes.

The company says that, with production under way at its Falkland plant, mail order sales will start within two months.

Pto Mag Systems, Technology Advanced Plastics, Falkland, Cleveland TS11 6ST.

Customer view of the Phoenix system shows the 111 tape loop and, at rear, the over-clocking processor.

You could be on our pages

We welcome programs, articles and tips from our readers.

PROGRAMS must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCM. Articles most likely to be published will help our readers make better use of their machines by giving useful ideas, possible with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can help other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Slipcott, Home Computing Weekly, No.1 Golden Square, London W1R 3AE

COMPETITION

Silversoft is one of our longest established software houses — and its range of best-sellers proves it.

Now you have the chance to win a prize package of Silversoft games for your Spectrum or ZX81.

Each of our 14 winners will receive software worth more £1. That's two classics for the Spectrum or three for the ZX81.

Your games will be selected from the Silversoft range by our readers. Choose from: *André le Fauconnier*.

All you have to do is to find the Silversoft idea in our word square.

If you're a winner with silver medal of the Spectrum your games will be drawn from this list:

Games: Grand Attack
Music: Cyber Ball
Strategy: Battle Strategy
Simulation: Armageddon
Master: Impassible

And if you have the **48K Spectrum** then Silver could be yours too:

Strategy: Elanor
Simulation: Simon Says

Winners with a **ZX81 plus MK I RAM pack** will each receive three of the following:

Games: Asteroid
Music: Asteroid

When the names are judged no distinction will be made between owners of either computer.

Names close to first prize on Friday April 4.

How to enter

Examine the word square carefully and try to find all the Silversoft software titles all of them, plus more, not in the word lists from

Spectrum and ZX81 users: win great games from SILVER SOFT

which most of the prizes will be selected.

Mark the titles you find by marking them with a ballpoint pen or marking them with a coin-scraper (big tip pen).

Cut out the coupon fully and clearly — if you are a winner it will be sent in a bag — and send the word square with the coupon to us.

You must mark on the back of the envelope the number of software titles you found.

Make sure you write back the model of your computer and its version, including RAM pack, on the coupon.

Please do not include anything else in the envelope.

You may enter as many times as you wish provided each entry is on the official coupon and word square and is a separate envelope. Incomplete entries cannot be considered.

Closing date is Friday April 4 at first post.

The names of the first 14 readers opened in random, regardless of computer owned, will win the prizes.

The prizes will arrive from Silversoft within 14 days of the publication of the list concerning the names of the winners and the winners.

The rules

The closing date is first post on Friday April 4, 1984 and the prizes will be allocated according to the list in order of entry.

Games which do not follow the publisher's name cannot be considered.

Names will not be accepted from publishers of Silversoft titles: Publications (Silversoft) and Silversoft. Please note that the publisher's name is not used in the title of the program.

The entry is deemed to find and no correspondence will be entered into.

First Strike 2
April 29, 93

Copyright © 2004, John Wiley & Sons, Inc.

Admiral's 2 follows the usual American pattern — that of a historically controlled service filled with fast changes and wars, through which the player survives. In Mark A. Siporin's *Armada*, on the death of the admiral, the game ends.

Although the black K is well-served with males and females, it has a lot to contend with. Heavy rains and mudslides are plentiful, and with burned timber cuttings, fuel and lightning strikes are constant targets for replanting on board members.

You are given the option when starting or pressing that "T" key for condensed results and more

Diagnosis rapidly — when
new, the microscope cap, the
space has been to prevent to
release your hand-held. I found
the program designed by the
"T" series is not good.

A state-of-the-art project, *Avantika 2* is a good example of its kind. The program is neatly designed and well complemented by color. If you haven't used it, the idea, *Avantika 2* shows, really is your appetite for quite a while.

Devastation &
Sabotage
TI-994A 04.99

Received: November 10, 2011; Accepted: December 1, 2011

Deception is another virtue of the simpler boarder would game as through you have to defeat a city by dragging boats on a river, or lead your grigions to battle. In this version, as well as the others, you have a number of command flags and you also have the ability to send small units you are creating. This feature can also be used to launch a number of ships, however, as there is a shortage of fuel. The game may be played on any of five skill levels, and is quite easy to learn. I found it very interesting.

Salinago, again, is a variation on an old theme: You try to control weeds on oil field containing several wells owned by a well-known producer who is looking for the world's top talent with the highest price. Your job is to develop the wells, with the exception, the wells will not be drilled up to horizontal water and you are not allowed to cross high water. (Your wife you have had

Complete and correct all very good and all two pages of information and submit. Signature of the owner always are necessary to look at. **D-21**

Yoshida, I. *Hologram: Science, Society, Japan*. New York, New York: 1980. 417 pp.

The licks and instructions on the packaging had led me to believe that this was an already on-guitar game, so it was quite a surprise to find, on loading it, that it is merely a computer version of an old board game. How then it's so much fun? — most of the features that made the board game worth playing have been

It's a game for two or four players. You have to produce oil, transport it by lorry (or pipeline) to a refinery, and then export it by ship. The first person to reach the export target is the winner. The decision-making required, and the strategy involved, is

collaborate with a representative, having been authorized to receive the relevant information in writing or orally.

The map is unlike the game-takes place in quiet atmosphere, but this does little to compensate for the basic dullness of the game. In fact, it's so boring that I couldn't personally suppose to play it with me. I did play it right through once, just to find there was no winning was anywhere in the end — (they were) — but I don't think I'll ever color it again. M.J.

pro clone.

1984 is already beginning to see Pro Clone Ltd as the most sought-after duplication house in the United Kingdom.

WHY?

- All our customers receive personal service
- All material is dealt with in the strictest confidence
- Our insistence on the use of quality raw materials and stringent quality control
- Extremely fast turn-round, normally within seven days
- Very competitive prices

We can also supply very high quality blank media — any quantity.

If you would like to discuss your requirements further, do not hesitate to contact:

A question
of value

Firstly, Firstly, have you any idea if you've probably heard the question a few times, but isn't the more sensible answer to reduce the cost of the water?

the best of the games? Well, pool games come around 50, with the best at around 112. How can your impact coefficient be low such as 10 without the real game?

I go to a school where the company's density is very high and so is the parity of games. But why do people purchase the best of coefficient?

It must be possible to sell all these good guitars to someone on the market with a smaller price tag. After all, it only makes sense if someone happens along able to market our goods. The methods described and profiles sketch above bring the move out to about 100.

Before I go I'll leave you with two copies of games with a question. If the price of a game was reduced, would you buy the copy instead of the download?

<http://www.elsevier.com/locate/jbiotec>

It's horses for courses

I would like to point out to Mr. HANSEN that we speak **EXACTLY THE SAME** thing, although the pronunciation of English language and our national language is extremely good here, it is in fact a totally improved pronunciation.

The single language — especially the three integrated BASIC — could possibly mean for the operations applications community all of it.

Every language has its own good points and its own particular problems. Even the low level has its own very useful examples to the most modern of the very high level artificial intelligence languages offered. The old and the high level ones compared themselves, like Pascal.

...the wrong effects and
efficiency. An effective
intelligence program at
the end of all this...

Each also has its own specialist applications in its own field of industry, commerce or wherever. (Look for business articles primarily). Points for scientific and mathematical problem solving.

By joining a company's state applicant program or CalNet or, alternatively, a state contractor program in Texas,

Effectively, small language
fams. is permanent, independent, and
flexible. They can make

Send your letter to Letters, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Don't forget to name your computer — the best letter could win £5-worth of software. Got a problem with your micro? We'll soon be starting a queries page, so send your technical questions to Queries at the above address.

specimens the most effective and appropriate language for that application should be chosen.

I would point out that the original intended application for BASIC was as a simple high level language for computers to store ideas, programs, etc.

This application is not
followed by you and/or
language, but it is
up to the state of the
law.

Even though B&BHC is slowly moving away from its roots, it would be a pity to appropriate language to inflict upon professional programmers, especially when B&BHC staff has diversified into so many other areas of work such as wide range of non-IT activities.

Below other languages are
the chosen languages mentioned
above in 1998.

Magazines must act over money

Computer games software is the dynamic current side of the current economic situation and is an area where, for example, British Rail is a tangible head case

The games software industry is a part of the emerging space technology industry and our goal is games will be reflected in other areas of technology as they emerge, given a chance.

The focus is on joint software development, not only sharing but co-producing, developing, adapting and in the process creating the business technology programs, it could become a major source of employment.

All that is being propagated by the selfish interests of members of the public who are causing great harm to Florida health. This is their life and not falling about dead!

However, we are talking about "sex groups" meaning real prisoners here, as they serving sentences and working as hard as 1,000 copies of supposed national idea on our side.

Conservation scientists regard coral reefs as such important systems as being a realistic overall picture of the world's oceans.

This is making the bookends of everything in the industry, including the magazine. The pattern companies have the best to spend on, advertising space and if the magazine continues will have lost it. That is the reality of the industry.

For media is a powerful force yet in that influence is doing little or nothing to win this power. Some magazines that carry total advertisements for Marxist copies. Some magazines have actually carried editorial condemning the papers. They are casting all their votes to save their lives.

The time has come for all copyright magazines to fall in line with the Copyright Clearance Center's new copyright fee schedule. The new fee schedule will be effective January 1, 1998. The new fee schedule will be based on the number of copies of the magazine that are sold. The new fee schedule will be based on the number of copies of the magazine that are sold. The new fee schedule will be based on the number of copies of the magazine that are sold.

It is not good regarding the welfare consequences to solve the problem, they have not the organization or power — it is the states that have. They imagine that they have and are facing up to it.

David Lammie, Mark
Boiler, Bruce Davis, Ian
MacIntosh, Stewart,
Angus Johnson, Lisa-

How far?

It also includes such differences as Windows 95/NT's larger file size and slower device transfer rates.

I have to make sure his world doesn't shut out the fact that I have now returned under house arrest.

J. Edgar-Morrell Institute, New York,
10011-3209

Question 1

The writing is not if anyone has got 100 per cent on the Spectrum version of The Wizard. My highest score is 92.5 per cent and if anyone has managed to get 100, please show me yours, would they please? (10/10)

**Paul Hynes, Vice-President,
Operations**

and 1994.

[illegible][illegible][illegible]

These games could be fairly easily converted to more consistent with Microsoft BASIC, FORN, and CERN standards (to be desired).

PAPER. The control background, horizontal column. **WALT** creates a page for a specified number of columns.

PLAT *n* is equivalent to **PRINT** if *x* is the horizontal distance and *y* the vertical. **PLATTING** *n* number and a colour worksheet.

RESEARCH **HOW THE RESEARCHER**
RESEARCH **IN THE RESEARCH FIELD**

returns the ASCII value for the comparison group

1994.11.17 message is repeated and sent

GLUG

CNL Plumbs the depths

Now you too can join in the high speed combat game, using my program for the Commodore 64.

The final point to note about the game is that it is for a hands-off, so you won't need Extended Play, Super Play, or any other add-ons.

A POINT and HEAD POINT mentioned in both parts of the program, and it designed to use Mathematica mode, so you can see the difference colored paths of you and your computer.

The second interesting feature of the game is that the keyboard can be used for both players at the same time. This is because one of the machine code systems splits the keyboard in two, allowing two people to enter keys at the same time, so you don't need two controllers to play.

Lightbulbs in that amount — five inches per strand — to make it fun to play, and fun after every session.

When the game is normally on, you have a resolution of 100 to 300 to play on, but this can be adjusted in steps of eight by changing variables XN and TY (e.g. if XN = 3 resolution will be 112 to 308).

Table 1

If you are not going to write machine code, you may have a high-resolution screen with POINT and READ commands, and a way to split the keyboard or read two characters. If these essential features are not included in your computer, it will probably not be possible to conduct this course.

Your program could also be made shorter, e.g. lines 128-133 should be replaced by a single statement:

Finally, Item 400-740, recommending the legislative process in an election of nature, should be adjusted to read: science, nature, and evolution.

As your legislation moves to be not randomly within this race, it is best not to let the resolution fall below 40 for 20, otherwise one of the sides may be placed outside the allowed range.

**On your
Lightbike
for a bout
of high-
speed
combat**

Two players both use the keyboard in Lightbiker, a fast-moving game for the Commodore 64, by HCW regular David Rees. And there are a few other novel features too.

Age Group	Percentage of Respondents
18-29	100%
30-39	83%
40-49	67%
50-59	50%
60-69	33%
70 and older	17%

[illegible]

To use the game, **DATA** is. There will be a dollar in machine code **DATA** is **POWER** on. The best you will use are then displayed as the high resolution screen is shown.

Then the grid edges are drawn, and the game starts in earnest. After it is finished, a point is added to the score of the player who won, and you can play another game.

Note: An unad. Commodore BASIC control character has appeared in BASIC at the line above. These BASIC should not be used.

U.S. SCENE

Critics cool on CBM 264

I suppose you might have heard by now that Jack Trammell, company founder and president of Commodore, has resigned from the company. Commodore is still looking under the covers. Within four weeks of Trammell's departure, four other high-level Commodore executives also resigned.

Although the two newest Commodore machines, the 264 and the 284, were slated for an April delivery date, it seems apparent that the high-level shake-up may cause this date to be postponed. Some industry observers feel that without high-level management, well-versed in the computer industry, Commodore may be left without a clear-cut marketing plan for the rest of the year.

Despite this, it is unlikely that the company will feel any permanent effects in the marketing. After all, the Commodore 64, with its under-\$1999 price tag here, has all but eliminated competitors in the low-end home computer market. Since the 64 is selling so well, they can readily afford to hold back the market introduction of the two new machines.

Another prime reason for Commodore to delay the new computers is the extensive and successful proven the marketing by using industry analysts and critics. Any members of the computing press who are not pleased that neither machine was software compatible with the 64.

Each of these looks bad for the number of the computer press, so I can see much of a fever in the Commodore in the late 1980s or so.

New York Times update. Article last I wrote about the new reference show being aired on our Public Broadcasting Network which allows viewers to use their computers and systems to correspond with the producers of the show.

The host, Nicholas Johnson, author of How To Talk Back To Your TV Set, is now on the receiving end of his idea. Using The Source, an American computer database located available for subscription, viewers can contact the show via The New York Times Online service.

The service provides previews of coming shows, addresses and phone numbers for companies whose products were shown, Johnson's own syndicated columns, books available at discount, information on obtaining microcomputers of the show, artist special offers, and, above all, the chance for viewers to request ideas for future shows. "New show's called" here.

Is it about time? Who knows! According to the prestigious Stanford Research Institute (SRI), the average market growth of personal computers is expected to show slower and slower to a rate of about 5-8 per cent annually within the next two years. SRI has spent about \$400,000 on this research project.

Part of the results predict that within two years more than half of all personal computers sold will be replacements for older machines. The firm also predicts that businesses will not be buying as many personal computers when word-processing, spreadsheets, and communications can be tied into integrated systems.

This last prediction seems odd to me. Will things have come full circle in two more years? I thought one of the reasons that personal sales were purchased by business people was that they eliminated the need to depend on one central computer and sharing facilities.

Oh, well. People love to re-invent the wheel don't they? I'll see you in two years and let you know what happened.

I'll also see you next week and let you know what is happening.

Bill Barr
Fairfield, California

How to turn a BBC Micro into 14 lab technicians. For only £325.

As if the BBC Micro weren't already famous for its versatility, we've now taken it a step further.

14 ways to control science.

With the simple, and remarkably inexpensive addition of the Acorn IEEE Interface, the BBC Micro can control, manage and exchange data with up to 14 separate devices compatible with the IEEE 488 standard.

Which means you get the speed, accuracy and repeatability of computer-controlled operations at a fraction of the price of other systems. And without sacrificing the IEEE 488 standard.

The possibilities are limitless. The peripherals can range from a simple printer or a digital voltmeter to oscilloscopes, logic analysers, spectrum analysers, function generators, frequency meters - even a complete configuration of multiple controllers and complex equipment.

The Interface is familiar.

A Read Only Memory plugs into one of the Micro's spare ROM slots, providing the Interface Filing System, a set of commands in plain English, and in the straightforward format already familiar to those who know the Micro/Commands can be incorporated in any language available on the BBC Micro, including the popular BBC Basic.)

More facilities.

But the BBC Micro/IEEE Interface combination gives you more than just control.

Thanks to its renowned graphics capabilities, it provides the ideal way to present experimental results in

an instantly understandable form. A second processor can be connected for even faster processing and greater memory capacity. Or the Micro can be linked into Acorn's Econet local area network.

And even more.

And with its additional 1 MHz Bus connection, the Interface can even be linked to other interfaces, including Acorn's Teletext adaptor.

Finally, because the Interface operates independently, the BBC Micro is free to perform all its other functions as well.

So you can take advantage of the ready-made programs covering education and business subjects. You can use it as a word processor. Add a disc drive. And that's only the beginning.

How to get yours.

The IEEE Interface costs just £325, matches the BBC Micro in colour and profile, and comes complete with integral power supply and file server ROM.

If you're a credit card holder, you can order the IEEE by ringing 01-200 0200 anytime.

Or 0533 793040 during office hours.

(By ringing the same number, you can get the address of your nearest stockist, or full details of the BBC Microcomputer system (if you don't already have one).)

Alternatively, you can order the package by sending the order form below to Acorn Computers, c/o Vector Marketing, Devington Estate, Wellingborough, Northants NN8 2HL.

Please allow 28 days for delivery.

Credit card holders, telephone 01-200 0200 anytime, or 0533 793040 office hours.

Technical Specifications.

PCB carrying IEEE 488 bus interface circuitry, using TMS 9914 integrated circuit.

Internal power supply.

Height 70mm Depth 350mm Width 200mm Weight 2.1kg

Colour: BBC Computer cream

Construction: Moulded top and bottom to match BBC

Computer profile. ABS injection moulded plastic.

Power in: 240v, 50Hz, 3w

Operating Temperature: 0° to 35°C.

Designed and manufactured to comply with BS-415 Class 1 standard.

To: Acorn Computers, c/o Vector Marketing, Devington Estate, Wellingborough, Northants NN8 2HL.

Please send me _____ Acorn IEEE Interfaces at £325 each, incl. VAT and delivery I enclose PO/deposit payable to Acorn Computers Limited Readers A/C or charge my credit card.

ATARI PROGRAM

HOWMAN, any six-level maze game, runs on any Atari computer model.

As you would expect, you grade 10C-Women with your psychosocial response a more full of love.

You must try to clear the water off as fast without being pulled up by one of the ghosts which are in pursuit of you throughout the game.

Each time you get caught by a ghost, you lose one of your three lives.

The discs are worth 10 points each, and note that the photos can sit there too!

Positioned in each corner of the station are power poles. If you cut one of them you gain three. (4-4)

1000

The program is in **GRAPHICS**. It is a test mode which divides the screen into 30 by 30. The characters are redrawn in later levels. **LOAD**

STITCH (3) reads the program Lines 1000 to 1000, draws the table using DATA statements. **PLOT** places a single character at position 5,3, on the screen and **DATA/OTO** draws the position 5,3. Thus, the last message, printed.

POINT locates the center of the specified object on the screen. **LOCATE** positions the cursor at the specified place on the screen and reads the coordinates on the screen.

It may pay to visit with ERM leaders in London, but through the program

- 25-energy units will be added to the Power Core indicator GPT in the bottom of the screen
- The ghosts will freeze
- You can eat the ghosts for a steady 500 points each until the PT indicator reaches zero

- The above will answer

- You can use the phone for a **major 400 points** each week the **FT** education structure gives

The power pins are also worth 30 cents each.

[illegible]

All the features of a fun arcade game are in Victor Thorn's program

	Variables
CMS	initial observers to be recruited
CMS	starting address of observer distributed as
CMS	starting address of each element held in CMS
I2	first remaining
I2	score
F1	curve, local maximum
A1	SOCRAM's horizontal, vertical position
ST	local MINIMUM value
Z	character LINEAGE variable
D	delete — there are CM where the mass is full
J	used in FOR...NEXT loop $\text{J} = \text{PROM}$ (M), which checks for ground tap up
T	used in FOR...NEXT loop, and also with SET and PUT where T equals I, J, or S
J	determine how many phases are in mass
CM	$\text{CM} = \text{CM} - \text{SP} / \text{speed}$
TIME	time over spent
CM	value of a last number if last position of jumps was right then CM would be the first number which makes NO Phase right.
G2	upper case
NO	wrong script holds some of test is power
NO	test is wrong

and the others are still loved and
remembered for years.

There are six skill levels, each selectable from the keyboard at the beginning of each game. 1 is casual, 6 is hardcore. These are

skill level	No. of phonics	phonics speed
1	1	slow
2	2	slow
3	3	slow
4	4	fast
5	5	fast
6	6	fast

If your name is among the 30 best you can enter your name — up to 30 letters — in the Top 30

"When entering this program, I would advise you to treat our all the EEPs as if you were considerably faster without them."

Gobble the dots and avoid the ghosts...

SITUATIONS VACANT

Young communications
oriented company aiming
to develop an interest in
home computer games
and other software wishes
to meet youthful
enthusiast to advise on
new products. (Ability to
generate new programs,
although of interest, is not
necessary.) This is an
opportunity for a home
computer fan to convert
their enthusiasm and
initiative into a job.

Write to: Personnel,
Hoddings House Ltd,
21 Ashall Crescent,
Edinburgh EH3 5HQ.
